Fixed Prosthodontics

1. Staffs and Students (April, 2009)

Professor Hiroyuki MIURA
Associate Professor Keiichi YOSHIDA
Junior Associate Professor Daizo OKADA
Assistant Professor Wataru KOMADA, Chiharu SHIN, Kosuke NOZAKI, Asano KAWAZU, Kumiko KAWASHIMA, Yuko KIZUKI, Yuji FUKUI

Hospital Staff Shiho OTAKE, Nao NISHIDA, Hanae OGIVARA, Mami INUZUKA, Keiko SHIONO, Izumi KATAOKA

Secretary Yoshiko UCHIDA
Graduate Student Emi NISHIJIMA, Chalida NAKALEKHA, Koichiro YUSA, Kenichi GOSHIMA, Haruomi ABE, Jinbao MA, Reiko OGURA, Naosuke KUMAGAE, Ning XU, Satoshi OMORI, Reina NEMOTO, Sachi MAKINO

2. Purpose of Education

The major subjects of the studies are occlusion of Cr-Br prostheses (fixed restoration such as crown and fixed partial denture), analysis of mandibular movement, influence of crown and periodontal tissue and its systemic affect, accuracy of manufacturing processes of crown (i.e. casting, soldering, luting and adjustment of occlusion), functional analysis of stomatognathic system and development of apatite ceramic implant. The research themes are investigated with measurement systems of mandibular movement, measuring instruments of tooth micro-displacement, electromyography, measurement apparatus of dimensional accuracy, EPMA (electron probe microanalyzer) for analyzing very small amount of dental alloy and histopathological methods. Clinical training and general lecture on prosthodontics are prepared for the graduate students in the first year. After the second year they will have special training for their research methods and experiments will be performed according to the research plan. In the last year the students will write the paper for thesis under the direction of the professor.

3. Research Subjects

1) Occlusion and Mastication (mandibular position, mandibular movement, articulator, masticatory efficiency)
2) Influence of occlusal contact on stomatognathic system including periodontal tissues. (Tooth displacement, distortion of alveolar bone, occlusal contact, proximal contact etc.)
3) Clinical application of All-Ceramic CAD/CAM FPDs.
4) Influence of occlusal height for an important prosthesis on the periodontal tissues of the antagonist.
5) Application of laser welding in crown and bridge restorations.
6) Influence of dental materials for periodontal tissues and biological body.
7) Functional analysis of abnormal stomatognathic function

4. Clinical Services

1) Clinic for prosthodontics (Prosthodontics practice clinic)

This clinic is organized by clinical teams, and 4 to 8 dentists compose 1 team working in cooperation between teams. Here offers a complete range of restorative, rehabilitative, and esthetic dentistry, treatment types include since simple one teeth to complete oral rehabilitation using the latest technologies.

2) Clinic for dental allergy (Dental allergy clinic)

This clinic provides allergy tests test for dental alloys and dental materials on potential patients before dental treatment, besides, patients with skin and/or oral deseases histories induced by previous dental restorations. The causal allergen/s is/are identified by patch tests or if some metal restoration is allergy set on, is analyze by Electron Probe
Micro Analyzer (EPMA), removing out only restoration such content allergens.
