医歯学先端研究特論

Special Lecture of Advanced Medical and Dental Study

(生命理工学先端研究特論) (医歯理工学先端研究特論)

The dental material science behind glass-ionomer material and other newly developed materials

Historically, dental materials and its technology are continuously growing by technological innovation. For example, dental cement has improved from luting material to adhesive material with innovation of adhesive technology. In this lecture, the background of research and technology for dental cement and newly developed technology and material from GC will be introduced.

Dr. Kyosuke Hirano
