第51回グローバルCOE海外研究者講演会

歯と骨の分子疾患科学の国際教育研究拠点
ーデント・メドミクスのインテリジェンスハブー講師: **Dr. Nairn Wilson CBE FKC**

Professor of Restorative Dentistry and Dean and Head of the King's College London Dental Institute and Deputy Vice Principal (Health) King's College London

日時: 平成23年11月18日(金) 16:30~18:00

場所: 1号館9階特別講堂 (Bldg. No. 1, 9F auditorium)

演題: **Clinical Dental Medicine 2020**

The clinical practice of dentistry will continue to undergo significant change in the foreseeable future. Changes anticipated in the next five to 10 years include new approaches to prevention, developments in diagnostic systems, the further development and increasing use of tooth-coloured restorative systems, a trend towards “removable free prosthodontics”, the application of tissue regeneration techniques in periodontology and endodontics and advances in bone biology in orthodontics, together with stem cell and robotic surgery methodologies in oral surgery. As a modern biomedical healthcare science, dentistry will have the opportunity to be an integral element of the future development of mainstream healthcare.
