

ANNUAL PUBLICATIONS

Department of Maxillofacial Biology Maxillofacial Anatomy

1993.1.-2000.3.

I. Staffs and Students (April, 1999)

Professor	Yasuo Yamashita
Lecturer	Shunichi Shibata
Research Associate	Shun-ichi Shikano
"	Shuhei Torii
Technical Official	Michi Matsubara
Graduate Student	Akiko Nozawa
Special Student	Tsuyoshi Daigo
"	Yutaka Tooyama
"	Hisashi Wakuta
"	Takahiro Yamada

II. Educational Outline of Graduate Course

This course is educated aiming to teach the feature of a positional relation of the organs which composes the maxillofacial region each other and those macroscopic structures, and to understand the function of the structure which composes them from the viewpoint of morphology.

III. Research Subjects

To examine the structure of teeth, periodontal tissues and soft tissues in the maxillofacial region to investigate the support mechanisms of teeth and system of mastication from a viewpoint of morphology, the following themes are researched.

- 1) Mechanism of epithelial attachment of junctional epithelium in human gingiva.
- 2) Macroscopic and histological observation of *Corpus adiposum buccae* .
- 3) Transmission electron microscope observations on structural changes of teeth by leather irradiation.
- 4) Latin adjectives that mean international anatomical names consisting of plural words, and classification of the corresponding words in Japanese anatomical names.
- 5) Comparative histology and embryology of teeth.
- 6) Histogenesis of periodontal tissue.
- 7) Structural features of mandibular condylar cartilage.
- 8) Research of function of dental lamina in tooth development.
- 9) Research of functional skeletal morphology of maxillofacial region.

IV. Publications (January, 1993-March, 2000)
