

Tokyo Medical and Dental University (TMDU) offers the International Faculty Development Course (IFDC) with the purpose of introducing expertise in clinical dental education at TMDU.

This course for clinical, research and dental education offers you up-to-date maxillofacial prosthetic clinical knowledge and techniques that are important for improving or recovering oral function. The need for this field is increasing due to affects of COVID-19 and injuries in war torn countries. This course aims at not only 1) updating participants' dental clinical knowledge but also 2) developing clinical techniques useful for your future clinics and/or teaching. You will have the chance to actually engage in discussions with your peers and build networks.

This version consists of on-demand video lectures and LIVE sessions via a web conferencing system by TMDU.

Dates

April 8 (Friday), 15 (Friday), 22 (Friday), 2022
18:00 JST- 19:30 JST

Style

On-demand video lecture + Live discussion session via a web conferencing system (Zoom)

Goals of this course

1. Gain new knowledge about maxillofacial prosthetics and new approaches for future treatment, research and education
2. Consider your clinical cases from a critical perspective

Registration and Course Fees

Registration fee (50,000 JPY) + Course fee (10,000 JPY)

Certification

A certificate of completion including hours of study and topics covered will be given to those who attend every assigned session.

TMDU International Faculty Development Course (Online) - Maxillofacial Prosthetics - On-demand video lectures + Live discussion sessions April 8, 15, 22 (F), 2022

Application Qualifications

1. Educational Background/Research Experience: Only those who have dental or medical licensure or dental school graduates can join this course.

https://www.tmd.ac.jp/english/international/globalization/southeast-asia_2_/IFDC_mp.html

* If minimum enrollment of 5 is not reached, the course will be cancelled.

Our Vision

For healthcare professionals, continuing education is essential for keeping abreast of advances in science and technology, new discoveries, and providing high-level education. TMDU provides continuous learning opportunities necessary throughout a dentist's career to update the dental skills, knowledge and current educational methodologies that TMDU provides, which indispensable for improving oral healthcare provision and education.

TMDU Frontrunners

TMDU provides the top class education in the areas of dentistry in which Japan excels. Dental education worldwide is in need of such knowledge, and to have the opportunity to learn up-to-date information from forerunners in the field will be very beneficial. TMDU frontrunners are also the leading researchers and educators in their field and provide health care and education based on the newest evidence and their research outcomes. We are pleased to share some techniques including the educational methodologies we use.

Continuous Learning in TMDU

TMDU is proactive to the needs of overseas learners, and educating global healthcare professionals and top-level researchers in the areas of research, education and patient care is one of our missions. Our university has accepted the largest number of international dental graduate students in Japan for many years now. As dental education must evolve accordingly, TMDU provides continuous opportunities for dental professionals.

International Faculty Development Course (IFDC)

This course offers an opportunity to learn up-to-date dental expertise including current educational methods through lectures/case-based studies and discussion sessions to improve professional competitiveness in the global community.
