

# 大学院特別講義

(医歯理工学先端研究特論)(医歯学先端研究特論)

(生命理工学先端研究特論)

下記により大学院特別講義を行いますので、多数ご来聴下さい。

## 記

1. 講師 Dental School of Rome Catholic University  
Diege Borgese (Adjunct Professor)
2. 演題 Guideline of Socket Preservation in order to maintain periodontal  
architecture for perio and implant treatment
3. 日時 平成 29 年 5 月 26 日(金) 10 時 00 分～12 時 00 分
4. 場所 7 号館(歯学部校舎棟)5F 保存科示説室
5. 講義要旨

Tooth extraction is a very common treatment in dentistry daily practice. During the extraction we eliminate the damaged tooth and also the inflammatory tissue that usually cause a large extraction cavity in the remaining maxillary or mandibular bone. The physiological bone resorption can be prevented using some conservative techniques for socket and ridge preservation. To achieve a good long term results using the Socket and ridge preservation technique a consideration and classification of residual alveolar bone wall remaining after the extraction is necessary to perform the proper surgical technique. A follow up of 5 years and more with human histology will be discussed.
