医歯学先端研究特論

Special Lecture of Advanced Medical and Dental Study

(生命理工学先端研究特論) (医歯理工学先端研究特論)

(生命理工医療科学先端研究特論)

The science behind glass ionomers and other newly developed dental materials

Historically, dental materials and its technology are continuously growing by technological innovation. For example, physical properties and aesthetics of glass ionomer restoratives have been improved by glass or polymer design. In this lecture, the background of research and development for dental cement, filling restoratives from GC are presented. And newly developed technology and materials will be introduced as well.

Dr. Yusuke Hokii

Senior scientist

Research & Development Department

GC Corporation
