Master's Degrees to successful candidates will be conferred on March 26(Thu) 2026, upon approval of the Thesis Defense evaluation by the Graduate School Committee. (Meeting: early in March 2026).

6. Precautions

○Research misconduct

Master's theses are to be written in accordance with the Institute of Science Tokyo Code of Good Research Conduct. They shall not contain any fabrication or falsification of data or findings, plagiarism in research-related matters, or other forms of research misconduct, and are to be written without outside assistance.

Fabrication: The invention of non-existent data and/or research findings.

Falsification: The modification of research materials, equipment and/or processes; the processing of research findings, etc. such that they are no longer authentic.

Plagiarism: The appropriation of the ideas, analyses and/or analytical methods, data, findings, research papers and/or terminology of another researcher without their consent or without proper accreditation.

○Required Documents of confirmation

When research for a Master's thesis includes any of the following types of research and it is not possible to confirm that such research has been conducted with the prior approval of the relevant committee, etc., or the research is in conflict with the Institute of Science Tokyo Code of Good Research Conduct, the submitted thesis may not be recognized as a Master's Dissertation.

In addition, in principle, with regards to the research used in the doctoral dissertation, the name of the applicant must be listed as a person conducting the research in the application documents to the relevant committee, etc. (*Required for research conducted by the applicant himself/herself directly). Any serious violation of Institute of Science Tokyo's Code of Good Research Conduct will be subject to punishment.

【Types of research in question】

(1) Genetic recombination experiments

- (2) Animal experiments
- (3) Experiments using pathogenic microorganisms, etc.
- (4) Experiments using specific pathogens, etc.
- (5) Research using human embryonic stem cells
- (6) Research using human induced pluripotent stem cells
- (7) Human genome / gene analysis research
- (8) Research involving human subjects (or human-derived specimens and/or data, including clinical data, etc.)
- (9) Plans involving the provision of regenerative medicine (Types 1-3)
- (10) Prerequisites for submitting self-declaration of conflict of interest

○ **Master's thesis**

Please note the following points when using the contents of published papers, experimental data, figures, etc., for creating a Master's thesis.

(1) Make it possible to clearly distinguish between the parts that the applicant has done and the parts that have not been done.

(2) Due to copyright issues, the applicant may need permission to republish the figures even if the papers are created by the applicant or research group.

If it is difficult to get permission to republish, be sure to edit the figure.
