講師：北海道大学歯学研究院・名誉教授

佐野 英彦 先生

演題：Importance of collaborative projects for our field of research

日時：2024年1月31日(水) 13:00～14:30

場所：7号館5階 示説室

内容：

Dental science of our field is based on the applied science which utilizes the basic research results. Clinical dental science is levered by demand-driven research. We have been working on the industry-academia collaborative research which produced great many clinically relevant materials and techniques.

In 2024, Tokyo Medical and Dental University is going to be a new university, Institute of Science Tokyo, being together with Tokyo Institute of Technology. Under the new university system, faculty-faculty joint projects should be more and more important and easier to produce new results of research than now, needless to say the importance of industry-academia collaborative research being done before.

On this occasion, I would like to share our ongoing and previous experiences of research projects in Hokkaido University.
